Attachment to D2-SIS0-5011, Implementation Update Guide, Medical Records Retirement And Retrieval Enhancements Updates to CHCS S/W VERSION 4.603 + CPET for MRT, dated 10 Apr 2001

Setting up SY-ETU for transfer of Record and Shipment Index files for Medical Records Retirement and Retrieval

Below is an example session of setting up the parameters based on the configuration used at Wright-Patterson AFB. The responses to Enter Source Mask and Enter Destination mask strip are intended to strip the MRRS prefix from the files during transmission.

Enter number of descriptive name for transfer parameters: CHCS_TO_NPRC

Date and time of last successful transfer: <actual data>

Enter Name or IP address for remote system: FTP.AAC.VA.GOV

Enter User ID for remote system: NARAMRS

Enter Password for remote system: <TBS>

Enter Files to be exported: MRRS*.*

Enter Files to be imported:

Enter Receiving directory at remote system: /NARAMRS

Enter Maximum retransmits: 1

Enter File compression mode:

Enter File encryption key: <TBS>

Transfer mode is binary

Enter Transmission log transfer option: none

Enter Hour[:minute]s for automatic scheduled transmission: <SITE>

Enter Maximum allowable days between invocations: 365

Enter Source mask: MRRS*%+.&

Enter Destination Mask: *%+.&

Enter Record length:

Enter Email address for successful transfer messages: <SITE>

Enter Email address for failure messages: <SITE>

Firewall interface lines:

Enter Line 1: //

Lines executed prior to transmission:

Enter Line 1: // PASSIVE OFF
